

ADVICE FOR CUSTOMERS

Giving your clients plenty of information and advice on best practices before and after their spray tan application will enhance their overall experience with you.

BEFORE

Exfoliate and moisturize 24 hours before you apply your self tan, paying particular attention to elbows, knees, ankles and problem areas.

Avoid using bar soaps, high pH shower products, or in shower moisturizers for the entire 24 hours before your treatment.

Wax or shave at least 48 hours prior to treatment. This allows the pores time to close. Dotting in pores may appear if not adhered to.

Don't apply moisturizer, perfume, deodorant or makeup on the day of application. These products may act as a barrier against your skin and can prevent the DHA tanning actives from developing evenly.

AFTER

Wear dark loose clothing. Tight clothing or underwear may cause marks. Wear shoes that slide on or are loose fitting.

Shower lightly in cold - lukewarm water for 45 seconds after the first hour for a light to medium tan. The longer the tan is left on, the darker the tan (no longer than 8 hours).

Shower in plain water; don't use shower gels, scrubs, shampoos or a loofah during the first 24 hours after your treatment.

Pat dry and use aftercare products including moisturizers and gradual tanners after your first shower to extend the life of your tan. Moisturizing daily ensures long lasting results that fade evenly.

Avoid sweating and don't exercise or swim for the first 24 hours after your spray tan treatment.

Try not to touch your skin during development time. Any marks on your hands, therefore, are due to your hands touching the developing tan which can cause discolored, darker hands compared to the rest of the body which can be difficult to remove.

Long exposure to water and sweating from exercise will fade your spray tan. Your outer cells will start to soak up water which dilutes the effect of the tan. The longer you are in water the lighter your tan will get.
